

CS 255 Business Requirements Document – DriverPass

Purpose

- DriverPass wants a cloud-based system that helps students prepare for DMV driving tests through online classes, practice exams, and on-the-road training.
- The system will support customers, secretaries, instructors, the IT administrator, and the business owner.

System Background

- Many students fail DMV exams and need better preparation tools.
- The system must provide online training, practice tests, lesson scheduling, customer management, package management, and reporting.
- It must track reservations, cancellations, modifications, drivers, vehicles, and customer progress.

Objectives and Goals

- Allow customers to register and manage accounts online.
- Provide online classes and practice tests.
- Schedule, modify, and cancel driving lessons.
- Track lesson history, test progress, and driver comments.
- Provide role-based access and audit reporting.

Performance Requirements

- Web-based cloud application accessible from computers and mobile devices.
- Support multiple concurrent users.
- Provide timely DMV content updates and notifications.

Platform Constraints

- Accessible through modern web browsers.
- Cloud-hosted environment with database support.
- Must support desktop and mobile access.

Accuracy and Precision

- Each user shall have a unique account.
- System shall maintain accurate lesson, package, and customer records.
- Administrative alerts shall be generated for failed operations and security issues.

Adaptability

- IT administrator can add, disable, and manage accounts.
- System should support future package modifications and feature enhancements.
- Cloud deployment supports platform updates.

Security

- Users must authenticate with credentials.
- Role-based permissions shall restrict access.
- Password reset functionality shall be provided.
- System shall track user activity and maintain audit logs.

Functional Requirements

- The system shall allow customers to register for services.
- The system shall schedule, modify, and cancel driving lessons.
- The system shall assign instructors and vehicles.
- The system shall provide online courses and practice tests.
- The system shall track test scores and progress.
- The system shall receive DMV updates and notifications.
- The system shall generate activity and reservation reports.

User Interface

- Customers can register, schedule lessons, take practice tests, and view progress.
- Secretaries can create and manage reservations.
- IT administrators can manage users and reset accounts.
- Management can run reports and review activity logs.

Assumptions

- Users have internet access and supported web browsers.
- DMV updates are available electronically.
- Employees receive training on system use.

Limitations

- Users cannot update central data while offline.
- Future package customization may require developer support.
- Project scope is limited to requirements identified in the interview.
